

EMS SOLUTIONS™ Inc.

Welcome to the **FLIGHT Administrator's Management Series...**

We at EMS Solutions have developed a solution for managing a Flight-based Advanced Unit even simpler than before. We now have specific files in our Windows-based package which perform the following functions:

- + The First, **FLIGHT Personnel Records**, allows you to maintain records on all of your staff, including information on CEU & Division recertification tracking. It includes automatic generation of expiration warning and suspension letters as well as OEMS documentation regarding Basic Skills and Recertification. A Memo tool is provided for making brief, general or personalized announcements to the staff.
- + The Second, **FLIGHT Quality Assurance and Reporting Module**, provides the tools to develop a percentage-based report on all run sheets by filling in a simple questionnaire regarding completion criteria and performance levels. The resulting data can be printed out automatically in the format of a 100% QI Summary Report. The data can also be extracted and exported to a spreadsheet or charting package.
- + The Third, **Equipment Maintenance**, is a file which allows you to track service and maintenance on your capital equipment as well as identify its location within your unit inventory.
- + The Fourth, **Materials Receiving**, is a file which allows you to record incoming materials and supplies into the unit and track associated costs of operation.
- + The Fifth, **Municipalities, Hospitals and BLS Reference**, is a file which provides you with the municipal codes of all the town in NJ, hospital codes for all hospitals, BLS Squad data and HCFA location codes. All of these are editable and new data can be added to each category. This file is used as a reference to the MICU Call and EMT-D/FR-D files.
- + The Sixth, **PILOT Personnel Records**, allows you to maintain records on all of your pilots, including information on recertification tracking. It includes automatic generation of expiration warning and suspension letters. A Memo tool is provided for making brief, general or personalized announcements to the staff.

The FLIGHT Management Package also has the ability to provide a Multi-User environment, in either a server-based or a peer-to-peer, serverless environment. We will be happy to discuss this with your MIS/IT groups.

The price for this package is \$ 495.00, including S/H. Our Phone Number is (201)-847-9291. Please send your inquiries/orders to:
